

AMENDMENTS TO THE SPECIFICATIONS

Please replace the abstract with the following rewritten abstract:

--A coupling arrangement for enabling fixing of a body structure member and a structure member. The coupling arrangement includes, at least two threaded tubes provided one in either end portion of a passage through a housing. The housing is fixed attachable in relation to the structure members and includes a threaded passage, wherein a threaded bolt is arranged through the passage. The threaded bolt is adapted to connect the body structure member and the structure member in a coupling position, from which coupling position the threaded bolt, via inserts, enables adjusting operation of the threaded tubes in opposite directions along the threaded bolt. Thus, the threaded tubes are adjustable to a respective fixed position by screwing the threaded bolt.--

Please correct the title to state:

--COUPLING ARRANGEMENT--

Please replace the paragraph beginning on page 3, line 13 with the following amended paragraph:

--According to the invention there is provided a coupling arrangement for enabling fixing of a body structure member and a structure member. Said coupling arrangement comprises, at least two threaded tubes provided one in either end portion of a passage through a housing, said housing being attachable fixed in relation to said structure members and having a threaded passage, wherein a threaded bolt is arranged through said passage, said threaded bolt is adapted to connect said body structure member and said structure member in a coupling position, from which coupling position said threaded bolt, via inserts, enables adjusting operation of said threaded tubes in opposite directions along said threaded bolt, so that said threaded tubes are adjustable to a respective fixed position by screwing the threaded bolt (10).--

Please replace the paragraph beginning on page 5, line 31 with the following amended paragraph:

--Fig. 3 is a perspective view of a vehicle structure provided with a coupling arrangement according to the present invention.--

Please replace the paragraph beginning on page 9, line 3 with the following amended paragraph:

--In FIG. 3 a coupling arrangement 1 is used for securing an IP-panel 11 to a set of A-pillars of a vehicle 20. This is an example illustrating that a compact and integrated design may be accomplished by the coupling arrangement 1. Furthermore, the A-pillars are subject to high demands with respect to safety, impact, stress and at the same time they are to be used in a flexible manner during manufacturing of a vehicle. Hence, the function of the coupling arrangement, which provides support to the body structure and tolerance absorption to a second connecting structure member, are well suited for use in this particular case. Still there are many other areas of use for this invention, especially within the vehicle industry.--
